Onsite Return to Work: A Sikorsky Approach

Tuesday, February 02, 2021 | 2:00–3:00 pm ET

Since Lockheed Martin (LMC) acquired Sikorsky, medical treatment return-to-work (RTW) protocols have been developed in collaboration with Sikorsky and the local providers. Genex, LMC/Sikorsky and providers worked together to create job analyses and identified light-duty jobs/tasks that could be utilized for various conditions—down to injury by body part. These protocols have been incorporated into an onsite RTW program which has resulted in a 49% reduction in the number of lost time days.

The Pareto Principle: Applying the 80/20 Rule to the Connected Claim in Workers' Comp

Wednesday, March 24, 2021 | 2:00–3:00 pm ET

Successfully managing workers' compensation claims requires a delicate balance of connectivity, expertise and focus. Applying these key principles across your organization can help you to see the full picture of the claim to identify opportunities, understand data insights, apply automation and most importantly, allow your organization to identify and support the claims that require extra attention. In this session, Mitchell | Genex | Coventry experts will explain how applying the 80/20 rule to workers' compensation claims processing can help injured workers

get back to work and lead to better outcomes across the organization.

The Future of Technology in the Claims Process

Date and Time TBD

Automation has the potential to continue to make major improvements to the workers' compensation industry in terms of efficiency, consistency and more. While technological advancements can provide a plethora of benefits, there is still a need for balance between automation and human intervention in workers' compensation claims processing. In this session, Mitchell Senior Vice President Shahin Hatamian will discuss the future of technology in the claims process, including which processes make sense to automate and which will continue to require the human touch.
