Auto Casualty

Risk & Insurance: Can the Auto Casualty Claims Process Assist Workers' Compensation?

May 6, 2020
1 MIN READ

As more data becomes available, auto casualty insurers are learning how to apply that data to help predict injuries and improve claim processing. In this Risk & Insurance article, Mitchell's product management leaders Shahin Hatamian and Norman Tyrrell explain how prediction technologies are being used in the auto casualty industry today, and how the same innovations could assist workers' compensation claims processes.

“As injury prediction models continue to improve and become more precise over time, and more data becomes available from both auto casualty and workers' compensation accidents, this technology could expand and provide additional benefits for both claims organizations and claimants,” Hatamian and Tyrrell said in the article.
