Workers' Comp

Using Big Data to Make Big Changes to Network Development

April 22, 2015
1 MIN READ

Check out Genex's insight paper, "Using Big Data to Make Big Changes to Network Development," written by Jim Harris, Genex's vice president of analytics and reporting.

This paper explores how Big Data can be especially valuable in network development. Take a deep dive into how you can engage providers with the best track record for treating the injuries that drive comp costs, direct injured workers to those optimal providers and continuously improve the network through data analysis and application.
