Using data analytics to put a number on health risks and assess when to intervene to fix a problem

By Genex's Mariellen Blue and Jim Harris

WC Magazine - Spring 2017 - Lowering the Score 051617_Page_1.png

Gathering the right data

Information is collected at the initial intake, as well as throughout the life of the claim. These data points include factors, such as the injured workerâ€™s age,position and location. All appropriate data elements must come together â€” from claims, bill review, utilization review, case management, and pharmacy benefits â€” to obtain a complete picture. Continuing reading the full article here.
